At the 2019 San Diego Comicon, Adobe made a world premiere of a new family of products and devices, including:

- a new race of color cartridges for Adobe Color that makes it easy to get color right every time, no matter how you need to put it on the page
- a new drum system that allows you to create up to 10 millions of colors in 24-bit color space
- a new iPad Pro, bringing all of the new features and capabilities of the dark side in the digital photo editing space to a new tablet
- a new family of creative content creation tools with an all-new content pipeline, new color interfaces and features for creative work across all their apps

Many companies are moving production from their corporate campus or production lines to more remote and versatile locations. But for data-sheets, stuff that's getting moved every day or two, and content that you just want to take on the road, dedicated laptops with roomier memory and multi-core CPUs on the go also are essential. Herewith some standout characteristics that will make your work easier. Keynote and the rest of Apple's Mac line have been updated with a new graphics engine called 'Metal 2'. It means nothing specific to Keynote, but all of Apple's apps should benefit from the update, too. The biggest (and most obvious) change will be to Apple's Mac apps' usage of GPU rendering, which should now be more accurate and less poor. Although Metal 2 makes Mac more powerful, Hardware such as Power PCs and iOS devices have less power to run GPU intensive operations. A result of this and the wider nature of Metal 2 is that most apps would benefit from the faster rendering.

Adobe is also introducing a new selection tool in Photoshop. It is a fast, drag and drop method - with no tools or tweaking - for selecting groups of objects. And this ability to select groups is achieved via natural language, as you can now tell Photoshop "I want to select them all" or "all but this one", just by speaking natural language. The new selection tool does away with having to muck around with the shapes tool, and now you can edit your objects almost instantly, across platforms. Another important improvement in modernizing Photoshop is that all 3D assets work with the new native APIs, including 3D layers, hyperlayers and 3D manipulations. The future is brighter, more stable and engaging than ever before. The future of image editing is now largely confined to a native viewer on one platform. Adobe has broken through this barrier, ensuring that all major image editors are rolling out their apps on the new native APIs, beginning with Photoshop. Adobe's products are the ones that will continue to evolve, with the new features showcased at this year's MAX. Whether you're an experienced user or a nascent beginner, or even if you're not an image editor, you'll want to check out these new features. We've prepared a video overview that will introduce you to some of these features, including a live demo of the new in-browser workspace feature and an overview of the features from many different angles. Adobe merged its subscription-based Photoshop and Lightroom product lines. Both companies will offer Photoshop, Photoshop Lightroom, Lightroom Classic, and Lightroom CC as a single perpetual desktop and mobile app. With the new app you can now access all of the necessary tools and functions from all of the apps, regardless of which client you use, at the touch of a button.
