It combines simplicity and functionality in a way that makes editing photos easier and more accessible for the general public. The biggest issue of course with a software like this is that you cannot beat the price of the software. At around 30 euros (even lower depending on the discounts) it's not something that I'd call expensive. I can't see any reason why anyone would find it to be pricey for a good photo editing program that can be used on a variety of platforms. After using the software for a while, I've found that it doesn't offer anything new compared to other software that do the same. That said, it's a program that's definitely worth the price and is a real must-have for any photography enthusiast.
