The new Recoil Tool is also interesting because it allows you to also reposition your image according to an alpha channel or masking created through Photoshop. Registration makes it easy to keep your image precisely aligned to the mask or the layer that has been objectified with Registration. Or, if you're familiar with Photoshop's rectangle handles, the new automatic box crop tool that you can select in the Rectangle Tool will help you extract important parts of an image with precision. The original documents are retained, and no other changes can be made to your files. There is no tool as useful as the Clone Stamp Tool in giving you a seamless result. Element's new Auto-Enhanced Settings will allow you to modify the content that you need to modify, make changes to the image, and then re-enhance the duplicate to look like the original. Of course, you can also use the Clone Stamp Tool on your image to make changes without re-enhancements.

The tools are located in different places in Photoshop and some are located on the fly button. On top of this toolbox are the Photoshop options, where everything can be used in Photoshop. Also on the fly button can be found the snap tool, information panel, smart object options, and layers panel. The specific tools for this are called dialogues. In this kind of applications, it's best to use layers. When it comes to layers, they are important layers, and they are the interface of Photoshop. Layers are used as a container to add certain objects, without dealing with the objects inside. Editing a single object could be a nightmare if there's no layer and you just add more objects on the canvas. Photoshop contains different layers in a stack view. If there's more than one layer, they will be aggregated to a specific layer, so that they can be applied to all objects which are above the active layer. The active layer is the layer that is edited or selected, and all the active objects will be applied to it. The Photoshop Actions create a layer, add an object to this layer (or layers), and apply a special effect to this layer. For example, if you want to add your text, you could create a layer, and add the text to that layer. The text can be edited with a special effect.
